

WEBSAFE™

A solution that enables businesses to focus on providing the best guest experience and labor savings by reducing the time spent cash counting

Focus on Guest Experience

Allows the user to deposit the bank notes as they are received into a device at the point of sale which validates and securely stores the notes. More time is allocated to providing better customer experience and operating your business.

Manage Operating Costs

Reduce the amount of time and labour dollars spent counting and processing money by at least 70%.

Deter Theft

With cash being deposited directly into a secure device, the amount of money being left exposed is dramatically reduced. Over 98% of all notes are securely stored when they are accepted from the customer.

Reduce the amount of time spent reconciling

The solution produces detailed cash management reports which make daily reconciliations easier and saves a great deal of time reconciling the bank deposits

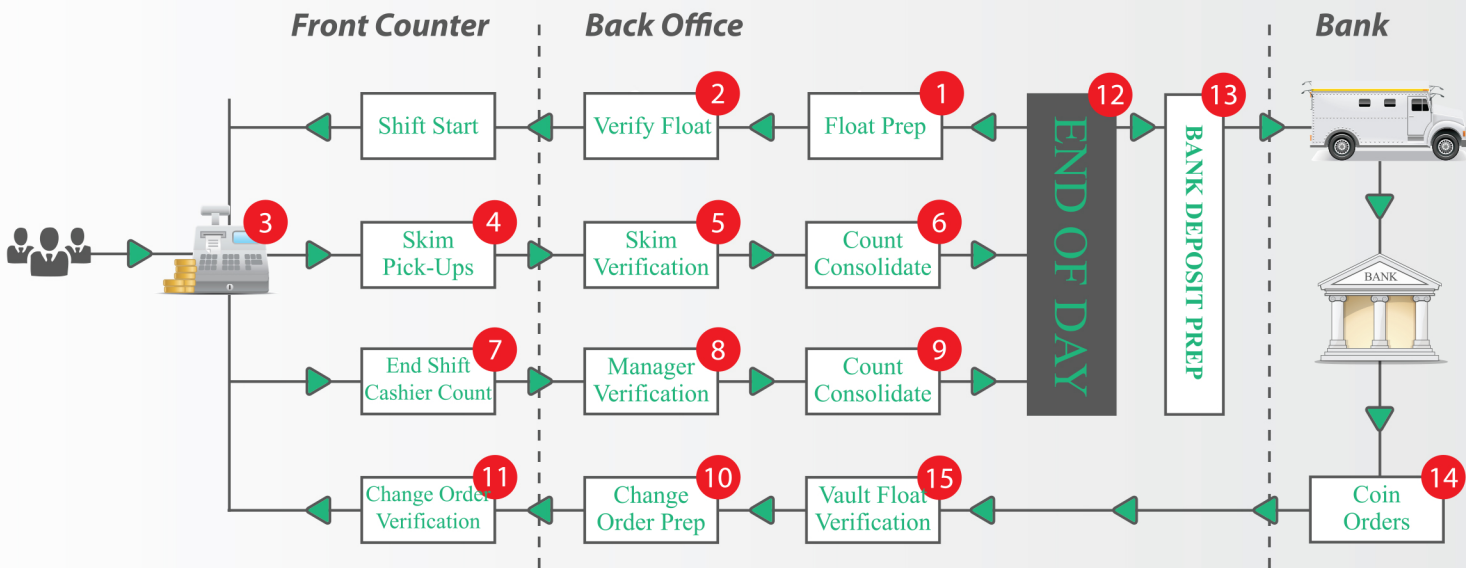

A Solution Configured to Meet the Needs of All Customers

GEMSYS WebSafe is a cash management and control solution designed to reduce labour costs and secure cash from the point of sale to the bank. Hardware and software components are configured to meet the specific requirements of each business. The phrase "one size fits all" does not apply here.

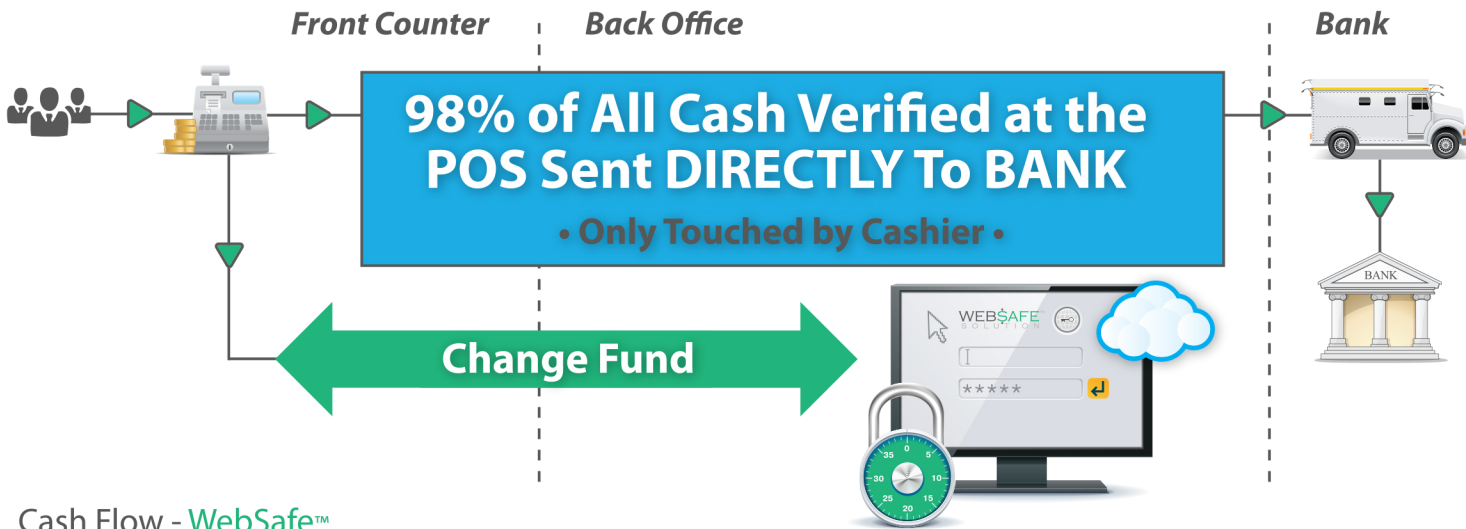

GEMSYS
SINCE 1988
Money Handling Systems Inc. 

Does Your Current Cash Process Look Like This?

if so... you should know that **there's a better way!**

GEMSYS WebSafe™ improves security and cash controls by dramatically reducing the number of times cash is handled and counted in your business.
